INTELLIGENCE REPORT

COUNTRY China

DATE: 25X1X6

SUBJECT Economic Information: Destruction by Chinese
Communists of Antung Transformer Stations

INFO. [REDACTED]

DIST. 31 March 1947

25X1A6a

PAGES 1

ORIGIN [REDACTED]

SUPPLEMENT

25X1X6

1. Antung (124-23, 40-09) normally drew its electric power from the Dairen line, which is supplied from the Suiho Dam power plant (124-58, 40-28). When the Chinese Communists occupied Antung there were four transformer stations in that city: Wutaokou, Ssutaokou, Liutaokou, and Tungkuantze. The Chinese Communists completely destroyed the first three stations by dynamiting.
2. The Wutaokou station contained three transformers for reducing 220,000 volts to 66,000 volts.
3. The Ssutaokou station was equipped with three transformers for reducing 220,000 volts to 3,300 volts - which serviced only the Natungkou (124-14, 39-52) area - and three transformers for reducing 66,000 volts to 2,200 volts.
4. At the Liutaokou station there were three transformers for reducing 66,000 volts to 3,300 volts.
5. The Tungkuantze station has one transformer for reducing 66,000 volts to 3,300 volts, but this station is a special type whose output compared favorably with the other stations.
6. At the present time, power must be obtained from Shingishu (Sinuiju, Korea) (124-24, 40-06), because the Tungkuantze station cannot transform the 220,000 volt current from the main Dairen line.
7. When the Chinese Communists occupied Antung, the power output was at a rate of 18,000 to 20,000 KW; when they left, the output was at a rate of 9,000 to 10,000 KW, which dropped to zero at their withdrawal. At present the consumption is at a rate of 2,000 to 2,500 KW. Plans are being made for restoration of the Wutaokou station if equipment can be secured.
